Attn: Human Resource

Dear hiring manager,

As you know, finding the right candidate for a Data Scientist position is very difficult because of the required skills for the job. A Data Scientist should have good presentation skills, the ability to explain complex topics to non-technical people, and having a good attitude for willingness to learn, along with all the technical skills. In my professional career, I have worked as a Designer, an Engineer, an Entrepreneur and currently working as a Data Scientist. From these roles, I have developed the required combination of soft and hard skills. With my academic and professional background, I am a valuable candidate for this position. Please accept this letter and the accompanying resume for the available Data Scientist role.

I am currently working as a Data Scientist Intern at a pharmaceutical company where I am using my multi-disciplinary knowledge of Data Science and Project management to perform reliability analysis and implementing new predictive maintenance models on production assets. Additionally, I am working with the legal department to develop models to extract unstructured data from contracts. In university, I have built models to perform complex clustering and content generation from multi-dimensional datasets.

The duties and responsibilities, which I had in my previous roles, are very similar to the duties and responsibilities mentioned in the job posting. I assure you that I have the right work ethic, and positive attitude to take on a challenging opportunity offered by this position.

I can be easily reached at your convenience by email (arsh.bamrah27@gmail.com) or by cellphone (416-200-1937).

Sincerely,

Arshdeep Bamrah
